

Light is forecast to undergo a transformation as LEDs move into general illumination as replacements for other technologies. Courtesy of SEMI, Philips Lumileds and Morgan Stanley Research.

LED revenues by application, in billions of US dollars. The market for LEDs is growing, with backlight applications in TVs and elsewhere driving the industry. In the future, general lighting will dominate, according to Yole Développement, which predicts that the growth seen in 2010 will continue through 2015, thanks to use in light and LCD TV applications.
